Kirby Rib II with masonry

H&H Truck Services is a division of H&H General Excavating Company which was founded in 1967. This pre-engineered facility will allow the company to expand and offer services, specializing in heavy duty trucks and trailers, to the general public.

The clear span design of this maintenance shop resulted in an extremely versatile, economical building. It includes a 2,200 sf storage mezzanine, and is enclosed by a combination Kirby Rib II & 8' block wainscot exterior, with Kirby Standing Seam 360 roof system. The building is heated using waste oil from vehicle maintenance.
