Saint Marys Water Treatment Plant Builder: BEEM Construction, Inc.

Located in Saint Marys, Ohio, the city chose a custom pre-engineered metal building as the ideal solution for their new water treatment plant.

The structure is a 16,328 square-foot facility with multiple symmetrical gable and lean-to buildings tied-in with high-low conditions. Inside, the facility includes a 42' by 55' top running crane. There are 2' eave extensions on all exterior walls. The exterior features entry canopies, full height brick on one building, and partial height brick with Kirby Reversed Roll Panel siding. Additionally, Kirby's Roof-Lok Plus roof system was utilized.
