Cypress Green & Pearl Gray

ROOF SYSTEM

SS360
Pearl Gray

BUILDING END-USE

Training Complex
& Conference Center

The Jackie Robinson Training Complex (formally Historic Dodgertown) opened in 1948, and for 60 years was the Spring Training home of the Los Angeles Dodgers and operated by Major League Baseball as a year-round sports complex and conference center. The new JRTC was custom designed by KBS, consisting of three pre-engineered clear span metal building systems joined together for a 162 ft x 238 ft practice complex. The front building is home of the entry way, the second houses the indoor baseball field, and the third (separated by a divider) contains two MLB length batting cages.

The roof system is built with the SS360 standing seam roof system for the most watertight surface, approved for high-speed wind uplift, hail, and fire resistance. SS360s allow for double layer insulation for a heated structure allowing athletics to practice all year. The wall system is constructed using Kirby Rib 2 (KR II) 24ga exterior wall panels with pearl gray panels and a cypress green wainscot for a strong, attractive exterior. KR II panels were added to the interior walls with a split-color design to match the exterior look and similar strength. The ceiling system was left exposed for added aesthetics and to allow suspension of equipment nets and a divider. There are eight overhead doors for easy loading and unloading of equipment and eight walk doors; each with matching pearl gray or cypress green framed opening trim.
